

There was an error generating your PDF.

Please make sure your code is clean and has the correct number of quotes, double-quotes, commas and other characters. Many issues are caused by a missing (or extra) character in your API call.

ERRORS FOUND:

- The source URL you provided was unreachable.

[/directorimedico/public/user/pdf/create](#)

Please make sure this is the correct URL and that it is publicly accessible.

If this is an internal URL such as a webpage on your LAN, please see our LAN example for how to get this to work.

Example: Generate a PDF from an internal web-page (intranet) such as
<http://192.168.1.105/page.html>

Visit: http://phptopdf.com/examples/#pdf_from_LAN

- SOURCE --> URL must begin with http:// or https://
